

## DID YOU KNOW?

We sell custom orthotic shoes in a variety of well-known name brands! Take a look at our catalog from the Orthotic Group:

<http://crs.theorthoticgroup.com/FootwearCatalogue.html>

We also offer custom orthotics designed for different needs ranging from dress shoes, to sports to diabetes. Here is a list of what we offer and why they might be beneficial to you:

### Casual

#### *SuperFlex*

An orthotic for patients who require one pair of orthotics to wear in the majority of their shoes. Our Superflex orthotics can be worn in most shoes with the exception of slip on dress shoes. **Best Suited For:** Patients who require a pair of orthotics that are versatile enough for casual shoes or sport shoes.

#### *SafetyFlex*

Specially engineered for your patients who are on their feet all day and need protection in a rugged environment that require the ultimate in comfort, shock absorption, stability, support and durability. **Best Suited For:** For a patient that will be wearing safety shoes and boots and needs the ultimate in

shock absorption and comfort.

## **Dress**

### *DressFlex*

An orthotic designed for patients who require mild to moderate biomechanical control in their slip-on or narrow cut dress shoes. This thin and narrow orthotic slips easily into slim fitting dress shoes. **Best Suited For:** Patients who require a thin and narrow orthotic for their dress shoes.

### *FashionFlex*

An orthotic for women who require support in their narrow high heel pump shoes or in their dance shoes. **Best Suited For:** Women wearing high heel shoes or pumps.

## **Sports**

### *SportFlex*

A generic sport orthotic for athletes and other active patients who require increased biomechanical control while on their feet. This orthotic is designed to prevent sport or workplace related injuries by protectin against pressure and impact shock. **Best Suited For:** Patients involved in moderate impact activities at play or work who require support in their athletic shoes or work boots.

### *RunFlex*

The Runflex orthotic is specially engineered for the high performance runner/court player. The unique design of this orthotic allows for increased shock absorption and greater directional control for athletes on the run. **Best Suited For:** Athletes who require superior shock absorption during running activities.

### *SoccerFlex*

Designed to prevent sport related injuries by protecting against pressure and impact shock. **Best Suited For:** Soccer players that require moderate to maximum biomechanical control.

### *CourtFlex*

Designed to take pressure off the Achilles Tendon, promote greater ankle dorsiflexion and increase shock absorption. **Best Suited For:** Specially engineered for the high performance court player.

### *EagleFlex*

The EagleFlex is a suitable orthotic for golfers who require biomechanical balance during their golf swing, as well as comfort and support while walking the golf course. **Best Suited For:** Golfers who require support in their shoes while on the course.

### *SkiFlex*

A sport enhancing orthotic designed for the avid skier. The Skiflex ensures greater control while on the slopes or on the trails. **Best Suited For:** Downhill or cross country skiers that require extra support in their ski boots.

### *SkateFlex*

A generic sport orthotic designed to fit ice skates or figure skates. Each Skateflex is cut perfectly to fit into the athletes skate, increasing the comfort of their feet during their time on the ice. **Best Suited For:** Hockey players or figure skaters that need an orthotic for their skates.

## **Specialty**

### *DiabeticFlex*

TOG is pleased to announce that we have changed the standard diabeticflex. It now includes a vinyl sandwich as well as 1/8" blue poron foam. A specialty accommodative orthotic designed for diabetic patients. The Diabeticflex has been specifically created to relieve high pressure areas and prevent the formation of ulcers on the diabetic foot. **Best Suited For:** Diabetic patients with sensitive feet who require an accomodative device.

### *CushionFlex*

An orthotic specifically designed for feet that can afford to sacrifice some correction for increased comfort and cushioning. This orthotic is suitable for an arthritic patient or a geriatric patient. A slightly bulkier orthotic that will fit in most casual shoes and walking shoes. **Best Suited For:** Patients who require comfort and cushioning (ie.geriatric patients, arthritic patients) and can fit a bulkier orthotic into a lace up shoe.

### *KidsFlex*

An orthotic for young children who require orthotic support in their sport or casual shoes. Designed with a deep heel cup to accommodate the larger fat pad found on the heel of a young child. **Best Suited For:** Young children under the age of 6 or less than 60lbs who require support in their everyday shoes.

### *UCBL*

A specialty accomodative orthotic designed for children. These orthotics include high, hard, medial & lateral flanges, with deep heel cups. **Best Suited For:** For children with flexible flat feet that require maximum biomechanical correction.

### *GaitPlates*

These specialty accomodative orthotics have been designed to induce toe out and toe in. To induce toe out, the plastic shell is shaped such that the plastic is distal to the 4th and 5th metatarsal heads and proximal to the 1st, 2nd and 3rd metatarsal heads. To induce toe in, the plastic shell is shaped such that

the plastic is distal to the 1st, 2nd, 3rd metatarsal heads and proximal to the 4th and 5th metatarsal heads. **Best Suited For:** Patients under the age of 8 that have excessive adduction or abduction of the foot during active gait. Children to wear in flexible running shoes. Out toe is selected to induce out toe. In toe is selected to induce in toe.
